DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 03 June 2008 has been entered.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. **Claims 1-15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Quiachon et al. (5,769,885) in view of Anderson et al. (5,647,857).** Quiachon et al. disclose a deployment system for a bifurcated graft where the main vessel portion is oriented distal relative to the branch vessel portions (see figures 7 and 30). The deployment system further includes an outer sheath (160) and an inner core (54) with a distal tip (80). Branch vessel restraints (132 and 202) hold the branch vessel portions and a main vessel restraint (93) holds the main vessel. An RO marker (166) is disposed on the outer sheath.

4. However, Quiachon reference does not disclose the main and branch vessel graft restraints are peelable. Attention is drawn to Anderson et al. who teach the use of a peelable sheath (restraint) over a graft with a release element (30, see figures 1 and 2) to allow the sheath to be peeled away from the graft instead of slid or displaced axially to prevent the retraction of the sheath from displacing or distorting the graft during deployment. Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to have made the restraints of the device of Quiachon et al. peelable, as taught by Anderson et al., to prevent the retraction of the sheath from displacing or distorting the graft during deployment.

Response to Arguments

5. Applicant's arguments with respect to claims 1-15 have been considered but are moot in view of the new ground(s) of rejection.
